HTML

C++

## PROJECTS

### Real-Time Chat System

- Developed a responsive chat system using Vue.js, HTML, CSS, and Bootstrap. Integrated features such as user authentication, message CRUD operations, and user search. Focused on creating an intuitive and user-friendly interface

### E-commerce Website

- Cloned and developed a responsive, user-friendly e-commerce website. Utilized JavaScript, CSS, and Bootstrap to implement key features, including a product browsing interface and a seamless user login experience, ensuring cross-device compatibility.

### Web API Development

- Created an API with Node.js and Express.js to handle basic operations like Get, Post, Update, and Delete. Connected to MongoDB to perform CRUD operations for managing data.

### Hate Speech Detection using Natural Language Processing (Sentiment Analysis)

- Developed a web-based platform enabling users to share daily life challenges and receive solutions from the community. Implemented a BiLSTM deep learning model for automated hate speech detection, enhancing user experience and safety

### Deaf Learning App

- Developed an e-commerce app using Java, which includes user and seller login functionalities, product search and purchase options, and seller product management features such as image upload, pricing, stock management, and availability settings
